

Wastewater treatment plant

Septic tank 4-22 pop

Balmoral septic tanks are designed to provide primary biological treatment to crude sewage produced in a normal domestic environment. It retains solids and allows them to settle out and become partially broken down by biological action.

The effluent is then sufficiently treated to soak into the ground via an underground distribution system.

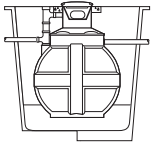

Illustration	Product	Pop. served	Nominal volume		Dia (mm)	Height
			Litres	Gallons		
	BST27	4	2728	600	1860	2566
	BST38	10	3800	836	2060	2825
	BST45	14	4546	1000	2180	2940
	BST60	22	6000	1320	2380	3190

Continuous Aeration Plant (CAP) 6-12 pop

Balmoral's best selling sewage treatment plant is universally popular across the UK and the Republic of Ireland and provides full treatment to crude sewage produced in normal domestic situations.

Balmoral CAP effluent can be discharged directly into a watercourse without having to pass through a soakaway.

HydroClear 6-50 pop

The premium performing domestic plant with BOD removal of 97%, the CE-marked HydroClear is easy to install and cost effective to maintain.

Balmoral HydroClear effluent can be discharged directly into a watercourse without having to pass through a soakaway.

Visit www.balmoralhydroclear.com for more information

Sequential Batch Reactor (SBR) 6-120 pop

A flexible, high-end product the Sequential Batch Reactor is designed to provide full biological treatment to wastewater of variable flows from commercial sources. Highly adaptable, the SBR can be optimised to provide customised solutions to a variety of non-domestic requirements.

Balmoral SBR effluent can be discharged directly into a watercourse without having to pass through a soakaway.
